

The ProVisions Mobile Fleet Manager is proactive, easy-to-use web-based software that helps food distributors pinpoint delivery times to deliver top-notch customer service, increase productivity for their dispatchers and drivers, and reduce vehicle and fuel expenses.

Powered by the award winning Elite EXTRA, the ProVisions Mobile Fleet Manager software optimizes truck routing, management and tracking to make dispatching more efficient. Integrated within the ProVisions ERP Software, the system can transform dispatch and delivery operations into proactive, automated Customer Service and Traffic Control Centers, getting drivers on the road with optimized route sequences, manifests sent right to their tablet or smartphone, real-time GPS tracking, and proof of delivery.

The ProVisions Mobile Fleet Manager eliminates the headache and expense of dealing with a separate black box and in-cab display device. Instead, in-cab communication between drivers and dispatchers is done via the tablet PC or smartphone—a simple, cost effective, and safe solution.

The ProVisions Mobile Fleet Manager includes a host of powerful and convenient features:

■ **Advanced Route Sequencing Optimization**

The Mobile Fleet Manager provides comprehensive dispatch and delivery functionality to optimize truck loading, route sequencing and provide dispatchers with real-time delivery tracking. As sales orders are entered into the system, dispatchers schedule runs or send the order to a delivery queue. Shipment information is then automatically posted directly to the drivers' manifest on their mobile device.

■ **Real-Time GPS Tracking for Full Driver Visibility**

Unlike other mobile dispatch solutions, the ProVisions Mobile Fleet Manager offers real-time GPS tracking of drivers and wireless communication between drivers and dispatch to provide full visibility at all times. As the GPS in the tablet or smartphone gets pinged every three to five seconds, your dispatchers will see on a map every move your drivers make. Because the GPS chips used in mobile devices are the exact same chips found in traditional in-vehicle GPS units, you can expect the same accuracy, at a much lower cost.

Most mobile dispatch solutions update ETAs on a manifest based on arriving at the jobsite. If there are three deliveries, the second and third ETA/stops are updated ONLY after the driver leaves stop one. The first ETA is never updated which can create issues with customers because ETAs are inaccurate.

- **E-Signature Capture and Proof of Delivery**

The ProVisions Mobile Fleet Manager offers an electronic signature capture and proof of delivery capability that securely stores signatures and high-resolution pictures of the delivered goods. You know immediately who signed for a delivery for easy proof of delivery right on your driver's phone. Whether scanning, capturing signatures, or communicating with dispatch, the ProVisions Mobile Fleet Manager empowers your drivers to take care of business.

- **Driver Vehicle Inspection Reporting (DVIR)**

The Mobile Fleet Manager includes an integrated electronic Vehicle Safety Inspection Reporting tool that facilitates driver and dispatch communication concerning vehicle safety issues. As the driver starts or ends his trip, he can photograph and document the inspection to alert dispatch of any maintenance issues with the vehicle.

- **Compliance with Federal Motor Carrier Safety Administration (FMCSA) Regulations**

Your company is likely affected by one or more of the U.S. Department of Transportation's Federal Motor Carrier Safety Administration (FMCSA) regulations. An affordable add-on to the Mobile Fleet Manager can help. Our single solution covers you for Telematics, Federal Compliance, Dispatch and Vehicle Maintenance. Monitoring vehicle health and driver behavior by connecting to the truck's computer, dispatchers can now manage your entire fleet by exception.

ERP Solution Optimized for the Food Distribution Industry

ProVisions Software is a turnkey business management solution that's been helping food processors and distributors enhance operational efficiency, reduce costs and maximize margins for more than ten years. Whether you deal in meat, beverages or specialty foods, ProVisions' integrated set of inventory control, production processing, sales and distribution tools will help your entire team work smarter and more profitably.

Developed in conjunction with an advisory group of clients, and continually enhanced over more than a decade with state-of-the-art technology and industry best practices, ProVisions consolidates critical information—from all areas of the business—to provide the industry's most comprehensive computer information and business management solution.
